Product highlights

LCOS Generation 3 Engine

The Philips Single Panel LCOS light engine generates the image on the screen.

Pixel Plus™

Uses the power of the Pixel Plus™ processor to increase the number of lines and the number of pixels. The result is razor sharp pictures with incredible detail and depth – every time from any source.

Digital Natural Motion

DNM is a unique digital signal processing technique that eliminates motion judder resulting in smooth motion. The advanced Philips chip used for DNM has the processing power of several Pentium processors. It has the ability to detect fast-moving sequences from film and video material and it can handle multi-directional movements at the same time.

Saphlon™ Screen

Screen technology that helps to prevent scratches or damage, while also improving the picture with higher light output and reduction of glare.

Dual Screen with two Tuners

Picture-in-Picture allows viewing of two television shows at the same time without the need for additional equipment, such as a VCR, to act as the tuner.

3D Comb Filter

Considered the best type of comb filter available, it separates colors and eliminates distortion to give you a razor sharp picture with breathtaking clarity.
